The Thirteenth International Conference on Advances in Databases, Knowledge, and Data Applications DBKDA 2021
May 30, 2021 to June 03, 2021 - Valencia, Spain

Tutorial: "Bashing" the Killer from the Command Line

Organizer: Andreas Schmidt, Lisa Ehrlinger, Fritz Laux

Exercise I

.

1. Download the Zipfile from https://www.smiffy.de/dbkda-2021/clmystery-masterFL.zip and extract it on your computer. Change into the generated directory and read the instructions given in the README.md file.

2. Change to the directory mystery and look in the file *crimescene* for lines, containing the label CLUE. These are the facts needed to solve the case.

3. Before you start, lets walk a little bit around in the directory and inspect the files with less, head, tail, … to get an idea about the information provided. Don't forget to also take a look into the subdirectories. So for example, at the beginning of the file *people*, you find some information on how you can interview a person.

4. With the actual knowledge from the tutorial, start with the last fact (barista) … If you struggle, take a look into the hint*<x>*-files.

   a. After you got the first information about the car, try to find the possible owners (hint6, hint7).
   b. Write the possible murders into a file called *potential_murders_by_fact-3.txt*

   If you end up with 6 suspicious drivers, you finished successfully the first part – Congratulation !!!.

How we can continue to solve the case with the information found in the murders wallet (fact 2 from the *crimescene* file), we will learn next …
